

# Boiler plate

```
const mongoose = require("mongoose");
```

```
//mongodb connection
mongoose.connect("mongodb://localhost:27017/userDB", { useNewUrlParser:
true });

//mongoose schema for items
const itemsSchema = ({
  name: String
});

//mongoose model
const modelItem = mongoose.model("Item", itemsSchema);

//3 new items documents
const item1 = new modelItem({
  name: "welcome to your todolist."
});
const item2 = new modelItem({
  name: "hit the + button top add new item."
});
const item3 = new modelItem({
  name: "<-- hit this to delete an item."
});

//keeping these docs in an array
const defaultItems = [item1, item2, item3];

//mongoose schema for list
const listSchema = ({
  name: String,
  items: [itemsSchema]
});

//list model
const List = mongoose.model("List", listSchema);
```
